LET'S GO FOR VROUVES

A tower defence game for the Amstrad CPC 64K

The story

Armed with EU Directive 8647/2026, the corporate goliaths at **Frankenstein & Moreau Co.** are deploying bio-drones, hazard squads and heavy machinery to destroy *vrouves* – the wild, "copyrighted" mountain greens of Crete.

In the village of Zoniana the people have had enough. Deploy the defenders to protect the Kafenio, the church, the town hall and the rest of the village, and above all their precious sacks of bitter greens. Luckily the rebel corporate drone **Psssst** has defected, and fights alongside the heavily fortified villagers.

Loading the game

You need an Amstrad CPC 464, 664 or 6128 with a disc drive (or an emulator) and the disk image `vrouves.dsk`. Insert the disk and type:

```
RUN"VROUVES
```

First come the REVIVE8BIT screen and the splash screen, each for 10 seconds or until you press SPACE / FIRE; then the game loads.

Leave the disk in the drive: the game reads the title screen and every stage from it while you play. There is a short pause with a black screen each time.

The title screen

The title screen opens with a scene from the game and the main keys, then tells the story and shows the defenders and the invaders.

Key	Action
SPACE / FIRE	Start the game
→ (or joystick right)	Next page
L	Switch between English and Greek
M	Music on / off

The game screen

- **The top bar** shows the stage and messages ("build, then press N for the wave", "wave cleared"). When there is nothing to say it shows the title of the game.
- **The playfield** is the village. The invaders come along the road; the drones fly their own way, straight over walls and trees. Your defenders go on the grass beside them.

- **The bottom bar** shows the wave (for example `03/10`), your funds (*vrouves*, the money of the village), the HP of the building you defend, and the seconds until the next wave (NEXT), or GO! while a wave is on. Below it, the selected defender with its key, price and what it does. When the cursor is on one of your defenders, it shows how much selling it would give back.

Controls

Key	Action
Cursor keys / Q A O P / joystick	Move the build cursor
1 – 6	Choose a defender (only those you have in this stage)
SPACE / RETURN / ENTER / COPY / FIRE	Build the chosen defender on the cursor
S / DEL	Sell the defender under the cursor
N	Call the next wave now
H	Pause / continue; ESC while paused quits to the title screen
L	Switch between English and Greek, at any time
M	Music on / off

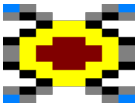

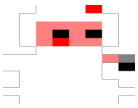

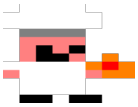

The cursor blinks white and yellow when you can build there, and turns red when you cannot: the cell is taken, it is not grass, or you cannot afford the defender.

How to play

- Each stage has **ten waves**. Before the first one you have 45 seconds to build; between waves, 15. You start every stage with **120 vrouves** and **100 HP**.
- Every invader you stop pays you: 3 for a drone, 4 for a guard, 10 for a tank. Clearing a wave pays a bonus of 15 + 3 × the wave number.
- Feeling brave? Press **N** to call the next wave early: half of the seconds still left on the countdown are paid to you as a bonus.
- Selling a defender gives back about half its price.
- Every invader that reaches the building steals greens: a drone costs 4 HP, a guard 8, a tank 20. The sacks of vrouves disappear one by one as the HP drops. At 0 HP the stage is lost and you go back to the title screen.
- Survive all ten waves and you move on to the next stage. Win the last one, and the vrouves are safe: the whole village celebrates at a feast in front of the school. Press SPACE / FIRE to go back to the title screen.

The defenders

Not everyone is ready from the start: the Kafenio is held by the Cretan and Psssst, and every following stage brings one more defender to the village. A new defender is announced at the start of its stage.

	Key	Defender	Price	From stage	What it does
	1	**Cretan**	35	1	In midnight black, with a hunting rifle. Hits drones and walkers alike.
	4	**Psssst**	80	1	The defected drone. Its laser also melts armour. It hovers, so it can sit on walls, trees, graves and other blocked cells.
	2	**Yiayia**	50	2	Staff of chastisement and a pot of bitter leaves: slows down every walker near her and gives the closest a heavy bash. She cannot reach drones.
	3	**Bride**	70	3	Wedding white and a rapid pistol. One shot in four is a critical hit for triple damage.
	6	**Baker**	60	4	Hurls dakos (barley rusks) that splash onto everything around the target.
	5	**Cauldron**	110	5	A toxic cloud of "unlicensed lipids and ascorbic acids": hurts every walker around it, ignoring armour, and slows them. It cannot reach drones, and tanks dent it as they pass.

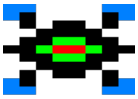

Neighbours

Some defenders work better side by side, and some get in each other's way. A defender right next to its partner – left, right, above or below, not diagonally – hits harder or softer:

Defender	next to	Damage
Bride	a Cretan	**+50%**
Yiayia	a Baker	**+20%**
Baker	a Cretan	**–50%**
Psssst	a Cretan	**–20%**

Before you build, the info line shows the bonus the defender would get on the cursor cell: green for a bonus, red for a penalty.

The invaders

	Invader	What it does
	**Bio-drone**	Fast and fragile. Flies its own shortcut over walls and trees, so only the Cretan, Psssst, the Bride and the Baker can reach it.

	Invader	What it does
	**F&M compliance guard**	Armoured, with a weed-whacker and herbicide. Armour takes some of every hit, except the Cauldron's cloud; Psssst's laser melts it away.
	**Weed destroyer**	A treaded tank with lots of armour and health. It dents Cauldrons beside the road, putting them out of action for a few seconds, and costs 20 HP if it gets through.

The invaders get tougher with every wave. In some stages they arrive tougher still.

The stages

1. The Kafenio. The road winds down from the hills to the village café, its porch stacked with sacks of vrouves.

2. The village church. The greens are hidden in the church courtyard, by the priest and the candle stand. The road is shorter, and the waves a little bigger.

3. The town hall. On the plaza under the old plane tree, by the fountain and the mayor. The invaders here are tougher than usual.

4. The bakery. In the yard of the bakery by its wood-fired oven, among the woodpile and the racks of drying dakos. The road crosses the map in three close lanes.

5. The school. In the schoolyard with its basketball court, the flag and the teacher.

6. The village pitch. The greens wait on the touchline by the coach and the team bench, below stands full of villagers. The road runs around the pitch, and you can build on the grass of the pitch itself; the drones fly straight across it.

7. The cemetery church. The last stand, at the little stone chapel among the graves and the cypresses. The road winds between the graves, where nothing can be built – except Psssst, who hovers.

Tips

- Look for the bends: a defender next to two stretches of road shoots at everything twice.

- Cretans are cheap and hit everything, but a single drone wave can slip past a defence made of walkers-only defenders. Keep something that hits the air near the drones' route.
- Put the Yiayia where the road bends, so that the slowed walkers stay longer under fire.
- Put Brides beside Cretans, and keep Bakers and Psssst a step away from them.
- Against armoured guards and tanks, Psssst's laser and the Cauldron's cloud are worth their price. Keep Cauldrons a step away from the road, out of the tanks' way.
- Psssst can sit on walls, trees and graves: use the cells no one else can.
- Call waves early when your defence is comfortable: the bonus adds up.

LET'S GO FOR VROUVES – REVIVE8BIT - 2026 - VASPER.
